SWITCHING  
SYSTEM.

British  
TELECOM

# MINIMASTER 3 SV

If you're a cost-conscious small businessman, the Minimaster 3 is very good news.

This remarkably affordable switching system does so much for so little, making your operation far more efficient.

## EXPANDING ALL THE TIME.

Every growing business needs scope for expansion, so the Minimaster 3 is designed to give you just that – allowing you up to two exchange lines and ten extensions. And to give you even more flexibility, you can choose the kind of telephone you want.

## MY CALL, YOUR CALL, HIS CALL, HER CALL.

Anyone can answer an incoming call at the press of a button – invaluable for times like lunchtime when nearly everyone's out of the office.

If you want to pass on an incoming call, you 'hunt around' for the right extension, ask if he or she wishes to take the call and, if so, you make the connection. You can also programme any extension to

divert all incoming calls to a secretary so you only get the calls you want to take

But at the same time you can still use your telephone normally.

And if an incoming call remains unanswered for 20 seconds, it simply moves on to another nominated extension. So you need never miss a vital message.

What's more, if you are on an internal call on one of these nominated extensions, you hear a discreet tone signal to tell you that you have an incoming call waiting. No lost calls, no lost business.

Minimaster 3 also gives you automatic redialling. At the touch of a button or two, you're reconnected to the last outside number dialled – perfect if the number you're calling is continually engaged.

## INTERNALLY YOURS, INTERNALLY OURS.

All extensions can communicate with each other – simply press two buttons.

You can even hold a conference across three extensions – or across two extensions and an outside line.

Of course, call hold and enquiry facilities work

# A SMALL PRICE TO P

# VITCHING SYSTEM.

internally as well as externally.

To help you differentiate between calls, internal and external ringing tones are both different and distinctive.

## ALL THROUGH THE NIGHT.

Minimaster 3 earns its keep throughout the night.

You can set incoming calls to ring a nominated extension, perhaps with an answering machine, on two line systems a central bell should be fitted so you can know a second call is waiting.

To initiate this night service, you press a button twice. Cancelling it is as easy.

## PLUG IN, PRESS ON.

Installation can be a problem with some systems not so with Minimaster 3.

Our engineers can install a complete system with its compact central control unit, wiring and telephones in less than a day. With no major upheaval

Minimaster 3 works with almost any of British Telecom's exciting range of telephones, as shown here.

From our range, you'll find telephones to fit perfectly with every part of your business.

(Some have a memory for numbers, others have two-way loud speakers. So you can

keep your mind free of digits and your hands free for note-taking.) One part of your business, for instance, may be better suited to a functional wall-mounted model. Another may require a touch of luxury.

## BETTER BUSINESS ALL ROUND.

If you're looking for the best possible system at the lowest price, with simple installation and maintenance, you'd be hard put to beat the Minimaster 3.

You'll find that installation and maintenance are simple and inexpensive. And equally important, you can contact our on-the-button sales service for advice at any time.

## GENERAL INFORMATION.

Each Minimaster 3 extension is connected to the control unit by means of standard extension wiring.

The Minimaster 3 central control unit is housed in a compact wall-mounted unit.

It is mains powered from a three pin socket outlet and measures just 385mm x 280mm x 80mm.

APPROVED  
for connection  
to telecommunication  
systems specified in the  
instructions for use  
subject to the  
conditions set out  
in them.

# PAY FOR PROGRESS.

## MINIMASTER 3.

Main Minimaster 3 features include
