# IN TOUCH.

Imaginatively designed, new generation telephone, the Versatel is a fully electronic press-button Inphone, with all its functions cleverly incorporated into the slimline handset.

Its modern styling looks good in every setting, at home or at work.

Advanced features include a last number redial button which reconnects the last number called at the touch of a button – useful if a number's constantly engaged.

When not in use the Versatel rests on its own neat black cradle, or an optional wall-mounting bracket can be purchased.

It also has a control for the tone caller – perfect for early morning calls.

The Versatel's mobile too – thanks to new Inphone plugs for use with the new style sockets. These can be easily fitted by British Telecom almost anywhere you want, at a reasonable charge

# IN TONE.

The Versatel is available in green, burgundy red or mushroom.

# INPHONE.™

The Versatel, like all Inphones, is engineered to the highest standards and is fully tested and approved for connection to the British Telecom Network.

We do our best to supply our customers with the apparatus they ask for but we may have to provide apparatus which does not accord exactly with the descriptions, illustrations and shades of colours shown in this broadsheet.

Versatel is a Registered Trade Mark of British Telecommunications.
