

The Regent

The key to profitable telephone
communication for hotels

**Better service for your guests
Less work for your receptionist**

Features

Wake-up calls

Guests can program their own wake-up calls and the Regent will call them at the right time.

Message Waiting

The Regent will automatically call the guest room with a distinctive ring at regular intervals. Your guest rings the receptionist and receives the message.

Room Status

The status of every room can be displayed on the console as required. Your receptionist can tell at a glance whether the room is occupied, waiting to be cleaned or ready for the next guest.

Call Metering

Your guests can make their own private calls and the metered units will be recorded automatically against their room. Your receptionist can display the information on the console at will. If required, greater detail can be obtained by attaching an electronic printer, or full call logging equipment can be connected if preferred.

Room Monitor

Reception can use this feature to monitor a room where a child has been left.

Priority Calling

Allows preferential telephone service to be given to your VIP guests.

Room Service

Because Regent has single digit dialling, guests can call a range of hotel services from their room by dialling or keying only one digit. Easier, Faster, No mistakes.

These are just a few of the many routine jobs that can be done by Regent, leaving your receptionist more time to devote to your guests.

Maintenance

The Regent finds its own faults and then displays the details on the console to assist our engineers to clear them easily and promptly

Power Failure

If there is a power cut, a back-up system comes into operation and up to 12 of the exchange lines are automatically switched to previously chosen extensions. No bookings lost!

Standby power can be provided as an optional extra.

Benefits

- 

As well as making life so much easier for your receptionist and your guests, Regent will make life easier for you too.
- 

From an extension in your own office you can dial all other extensions. If one is engaged or does not reply, dial a simple code and ring off. When the extension is free, or the person you want returns, the Regent will call you.
- 

As well as allowing the luxury of short code dialling for those numbers you often call, the comprehensive abbreviated dialling capability of Regent helps you to prevent those unauthorised and unwanted calls from your hotel service telephones.
- 

When you are dealing with a call, the Hold for Enquiry and Transfer facility allows you to:

 - Hold the call
 - Make an enquiry call
 - Return to the original call
 - Transfer the call to another extension
 - Set up a conference with up to 6 extensions
- 

If you need to get hold of one of your staff in a hurry and find that he is already engaged, the Regent has a special tone that sounds on their extension to tell them that someone is waiting to talk to them.
- 

By keying a simple code on your telephone, you can, at any time, arrange for your incoming calls to be diverted to any other extension. Particularly useful when you leave your office or are busy on other work.
- 

Finally, in the unlikely event that you wish to change facilities or extension numbers after the system has been installed, you can do this yourself from the console.

Isn't it time that you installed Regent in your hotel?
