

LEAFLET NUMBER	SERVICE OR APPARATUS PROVIDED	CONNEXION CHARGE			QUARTERLY RENTAL		
		£	s	d	£	s	d
<b>D400</b>	<b>PABX 3</b> The PABX 3 is an automatic telephone system designed by an approved contractor to meet the individual needs of a customer requiring more than forty nine automatic extensions. Dependent upon the size of the PABX installed, one or more cord-type manual switchboards are necessary. When more than one are provided they are put together to form a suite which can be extended at any time if the PABX capacity is increased. Maximum capacity of a PABX 3 is normally 1,200 extensions but if necessary a suite of switchboards to serve 4,000 extensions may be provided. Each switchboard is referred to as "Each manual switchboard position" in the charges shown below. Each 50 extensions of extension equipment capacity, or part of 50	30	0	0	22	0	0
	Each manual switchboard position	15	0	0	12	10	0
	Each extension	2	0	0	15	0	
	<b>See Note 7 regarding charge for modern telephones on extensions.</b>						
<b>D400</b>	<b>PABX 4</b> The PABX 4 is an automatic telephone system similar in purpose, design and construction to the PABX 3, using the same standard types of automatic equipment and extension telephones. It has virtually an unlimited capacity, offers more facilities than the PABX 3 and uses one or more desk-type, cordless manual switchboards. Like the PABX 3, the PABX 4 is designed by an approved contractor to meet individual needs, but a standard design of PABX 4 has not yet been adopted by the Post Office, and for this reason prior approval from the Post Office is needed before a PABX 4 installation can be connected to the public telephone system. Each 50 extensions of extension equipment capacity, or part of 50	30	0	0	22	10	0
	Each manual switchboard	15	0	0	12	10	0
	Each extension	2	0	0	15	0	
	<b>See Note 7 regarding charge for modern telephones on extensions.</b>

# Private Automatic Branch Exchanges (PABXs) and Charges

PREFACE  
SHEET D

ISSUED DECEMBER 1963

## SPECIAL NOTES REFERRING ONLY TO THIS SHEET

- 1 The charges shown are intended to be a simple guide and not a comprehensive list.
- 2 Exchange line charges are not included. These are given in leaflet General Information 1.
- 3 PABXs 1 and 2 are supplied by the Post Office on rental terms. Both systems are available in four sizes and the charges quoted for each size include the cost of providing and maintaining the whole installation.
- 4 PABXs 3 and 4 are not supplied by the Post Office and any customer requiring one of these systems must buy the equipment from an approved contractor who will also be responsible for installing it. The Post Office provides the extension wiring and telephones and maintains the whole installation for the charges shown. A list of approved contractors will be provided on request.
- 5 The connexion and rental charges shown for extensions are for those in the same building as the PABX. For each extension in another building there is normally a connexion charge of £5 and an additional rental based on distance.
- 6 The connexion charges shown for switchboards, switching equipment and wiring are fixed. The connexion charges shown for extensions are maxima; when extensions are ordered at the same time as the PABX to which they are to be connected, or subsequently when more than one extension is ordered at the same time, or when an extension is ordered at the same time as another major item, these charges are reduced.
- 7 When a new PABX is installed modern telephones are provided on all extensions and a single charge of £1 is made for each telephone.
- 8 Connexion charges and rentals for inter-switchboard (inter-PBX) lines are not given, as provision depends upon the inter-communication facilities required and the distances between the PBXs concerned.
