telex it

and at
once they
have it
in print

telex will

Increase the efficiency of your organisation.

Speed communications.

Improve your customer service. Written confirmation not required.

Ease language and time difficulties with contacts overseas.

telex is

Simple as typing – Quick as the phone.

A phone call is quick. A letter is proof positive. Telex combines the virtues of both. It provides a fast and reliable method of printed communication between telex subscribers.

Calls are made by dialling the number of the telex subscriber required, then as the message is typed it is received and printed word for word at the distant end. Both sender and receiver have a copy.

Most communications that can be typed can be telexed, and anyone who can type can easily learn how to operate a telex machine. A good typist can transmit at speeds of up to 35 words a minute. By using a special attachment, which provides a perforated paper tape, the message can be transmitted automatically at a constant speed of about 70 words a minute.

Each subscriber has a telex number and his own identification signal known as the "Answer Back" code. This code, which comprises the user's name or sufficient information for clear identification, is transmitted automatically to the sending machine giving proof that connection has been made to the required number. Both the telex number and the "Answer Back" code appear in the telex directory provided free to all telex subscribers.

Language difficulties are eased, for the printed word makes translation simpler. The time of day makes little difference to telex. Providing the power is left switched on, the distant machine receives messages automatically, there is no need for an operator.

Charges for calls are based, as for the telephone, on time and distance.

Streamline your communication system, and improve efficiency

We have a team of experts ready to advise you. If you would like more information about the telex service, please contact your local Telephone Sales Office. The number is in your telephone directory.
