

**There's a phone
message for you
inside**

No phone in your home? -You can have one now.

Aren't you missing something rather valuable? With a telephone you can chat to friends and make last minute arrangements. You can keep in touch with the family, make bookings, ring the shops and call the plumber or electrician at the first sign of trouble.

Then of course other people can ring you. Most of their calls will be friendly chats but sometimes a message can be vital. It's then that a phone can save you hours of frustration, a wasted journey or missed appointment.

Installation without fuss or inconvenience

In your area we can offer service now although in some areas people are having to wait. It's all a question of the availability of lines and exchange equipment. Our engineer will fit your phone quickly and neatly.

A wide choice

You can start with a Tablephone from a range of seven colours, a Wallphone from a range of three or, for a little extra, one of the newer and more elegant Trimphones available in three two-tone shades.

Tablephones

Wallphones

Trimphones

Like one?

Just ring your Telephone Sales Office. Their number is in the front of the telephone directory. It could be the last time you go into a call box to ring a number.

Why not have more than one?

An extension or two can make life much easier

Have you ever been rung up whilst you're slipping gently into a deep sleep? You can always ignore the phone, of course. But some messages are urgent and, the trouble is, you don't know until you've answered.

The easy way out is an extension by the bed. Then you just stretch out a hand. And, of course, you can make calls without stirring.

While you're about it, what about an extension to the kitchen? Or your garage or workshop, if you spend a lot of time in either place?

There are various other facilities. For instance, you can have sockets installed so that you simply unplug the phone and move it from room to room. A central bell rings, even if the phone isn't plugged in you never lose a call.

We have several other suggestions, too. There's the Amplifying Handset, designed for the hard of hearing, it gives fingertip control over the volume of incoming speech. Or you may like an extra earpiece so that two people can listen to the same call.

We'll be glad to send you full details of these and other useful facilities. Just ring your Telephone Sales Office (their number is in the front of your phone book). And we'll do the rest.

Post Office Telecommunications

We do our best to supply our customers with the telephones they ask for, but from time to time we may have to provide telephones which do not accord exactly with the descriptions and illustrations in this leaflet.
