

PROTEUS

Internal Telephone System
from British Telecom

PROTEUS Internal Telephone System

PROTEUS is a British Telecom internal telephone system which uses the latest solid-state technology and is available in two sizes:

PROTEUS-24: up to 24 extensions

PROTEUS-64: catering from about 20 extensions up to 64

Space-saving and smart

The equipment which controls and powers the system is housed in a Control Unit which takes up about the same space as an electric typewriter.

Constructed of anodised aluminium, with a front facia of bright matt-finished metal and other surfaces finished in fawn PVC, the unit is almost silent in operation and is designed to stand on a desk or cabinet – harmonising with your office decor.

Minimum wiring

Only a single pair of wires is needed for each extension, no matter how large the system – this avoids unsightly multiple cabling.

Flexible

Proteus-24 and Proteus-64 can grow as your business grows: additional printed circuit boards are fitted in the control unit as required – up to the capacity of each version.

Facilities

- Direct extension-to-extension calling
simply by dialling two digits
- Privacy on direct calls
- Conference calls
*up to six participants;
several conferences at the same time*
- Extensions to other buildings (subject to certain technical considerations)
- Customised extensions
*portable phone with plug-and-socket working;
duplicated answering points;
Executive/Secretarial intercom and diversion of calls*

Choice of extension phones

The flexibility of Proteus gives you a choice from a wide selection of British Telecom instruments in the full colour ranges. Some examples are:

- Trimphones, Tablephones and Wallphones (press-button and dial models)
- Selected Loudspeaking Telephones and Special Range Telephones
- Lamp-signalling Handsets
- Amplifying Handsets
- Speakersets

Short-term contract

No long-term contracts – both Proteus-24 and Proteus-64 are provided on a one-year agreement, and maintenance is included in the rental.

General Information

The system is mains powered, and is connected to a 3-pin 13-amp outlet provided by the customer.

Overall dimensions of the Control Unit are 472mm wide by 276mm high and 353mm deep; the fully-equipped weight is about 26kg.

Please note:

We do our best to supply our customers with the apparatus they ask for but we may have to provide apparatus which does not accord exactly with the descriptions, given in this leaflet.
