

The *Senator* call-connect system from British Telecom

There is now a better way to control 5 lines, 10 extensions
and the efficient running of your office: *Senator*

Efficient	The Senator call connect key system, which provides up to 5 exchange lines and 10 extensions, has distinct advantages over existing systems of similar capacity. Such facilities as single digit press-button intercom, hold/transfer of calls and programmable diversion of both internal and external calls are offered as standard.
Compact	The Senator is operated by a compact, wall mounted central unit, which is silent in operation – so there's no need for a special equipment room.
Inexpensive	Being far less expensive than existing systems (eg key and lamp units) and very simple to install, the Senator is a viable proposition for even the most modest of modern businesses.
Stylish	The Senator system comes with British Telecom's new Ambassador style light weight custom terminals which combine the convenience of press-button calling with flexibility suitable for a modern office or workshop. The handset covers a convenient personal directory and the terminal comes in a choice of stone or dark brown.

Facilities

Internal calling	Each user can call every other user on the system.
External calling	Special buttons give immediate access to exchange lines, and lamp displays next to the buttons indicate line availability at a glance.
Incoming calls	Senator has lamps and a buzzer to give visual and audible warning of incoming calls. Each user can switch off their own buzzer on selected lines. External bells may also be provided.
Call holding	You can hold an external call at your Senator terminal whilst you make another call to an internal or external number. The held caller cannot overhear your other conversation.
Call transfer	You can transfer an external caller to any other user on your Senator system.
Call diversion	You can instruct the system to divert your calls to another Senator terminal of your choice. This user can contact you and transfer calls back to you if you wish.
Express calling	An optional extra; a modified Senator terminal is required. By pressing just 2 buttons you can instruct Senator to call one of 10 pre-selected numbers. Users store their own selection of numbers and alter them as and when they wish.
Flexibility	Senator can work as a subsidiary to another private exchange. Inter-PBX circuits may be provided instead of extensions and private wires may replace exchange lines.
Power Supply	Senator uses your normal 240 volt, 13 amp power supply. However, if there is a power failure exchange line service is still available.

All the above facilities combine to provide you with efficient office communications in a stylish, compact, inexpensive business call connect system – Senator

Call your local Telephone Sales Office for details of availability of the *Senator* call-connect system. The address, telephone and telex numbers are shown in the preface of your Telephone Directory.

Whilst we do our utmost to supply customers with the equipment they want, we reserve the right to provide equipment which does not accord exactly with the descriptions and illustrations appearing in this leaflet.
