# Press-Button Telephones

## Please Note

We do our best to supply our customers with the apparatus they ask for, but we may have to provide apparatus which does not accord exactly with the descriptions, illustrations and shades of colour shown in this leaflet.

British  
**TELECOM** part of the Post Office

Printed by Uniprint (London) Ltd

PHME 12(5/81)

The phones with  
the modern touch.

These new phones score not only on their good looks but on functional efficiency too.

No longer do you have to wait for the dial to return before putting in the next figure. A press-button telephone lets you call numbers quickly and easily.

Press the telephone number into the phone and its clever little memory, which momentarily stores the number you have called, then transmits it at normal dial speed.

Press-button telephones may also be used on extensions from most types of PBXs or Call Connect Systems and most extension arrangements. In some situations however, customers may need to provide a power point.

Due to the gradual introduction of new equipment throughout the British Telecom Public Telephone System, customers ordering press-button telephones may be

provided with either ten or twelve button models, and in some instances a new dial tone. Users of the twelve button models will also hear a 'confidence tone' on depression of the press-buttons. This tone varies between press-buttons, simply informing the user that the telephone is functioning correctly.

Initially there will be no new facilities provided with the additional buttons, but their introduction is the groundwork for future new customer services. Because of this, no choice will be offered, and there will be no difference in charges.

Your Telephone Sales Office will gladly supply any further information on press-button telephones that you may require. The address, telex and telephone numbers are shown in the preface of your Telephone Directory.
