

Out of town but getting the message

Tern answering/recording machine with remote interrogation

British
TELECOM

Tern is so versatile it earns a place in any business. It gives you excellent control of all your business telephone calls in one compact desk top unit. Tern can handle all your incoming calls without supervision. But it is under your immediate control from a telephone anywhere in the world. It can record your meetings and even monitor your callers' messages.

It carries the British Telecom guarantee of good workmanship and service. Choose a Tern. It's guaranteed for a full year and maintenance facilities are available.

Tern

answering/recording machine with remote interrogation answers your business needs in so many ways...

Tern answers every incoming call with your own recorded message. Making the recording is simple with Tern. You select the RECORD mode, press the start button and speak to the built-in microphone. Touch the button again, switch to AUTO ANSWER and every caller will get your message.

Tern records callers' messages for you to listen to later. To hear the messages you simply rewind the tape and listen to them through the loudspeaker, or use the plug-in earphone for privacy. By controlling the speed of the tape you can store more incoming messages. This facility also lets you match the tape speed to an office dictation system. Tern lets you monitor incoming calls whilst the recording is taking place and you can intercept the caller at any time by picking up the telephone handset. The loudspeaker volume can be easily adjusted.

Tern allows you to check your messages from a telephone anywhere in the world. You simply call your number, listen to your own message and identify yourself. Your remote control 'bleeper' placed against the mouthpiece controls your machine. You can order it to rewind the tape, play your messages and backspace to repeat unclear or important phrases.

Tern takes note of your telephone conversations when required by recording at the touch of a button. You can then replay the conversation, store it or erase it in the usual way.

Tern 'sits in' on meetings or discussions as a recorder, using the highly-sensitive built-in electronic microphone or a more selective microphone plugged into the socket provided. Here again you can match the tape speed to your office dictation equipment.

Tern keeps you one step ahead in getting the message.
