

# The G P O Speakerset No 2

The Speakerset is a small loudspeaker with an on/off switch and a volume control. It is used with an ordinary or a modern telephone and amplifies incoming speech. The colour range - Black, Grey and Ivory - meets most requirements. The Speakerset can be useful:

## IN BUSINESS

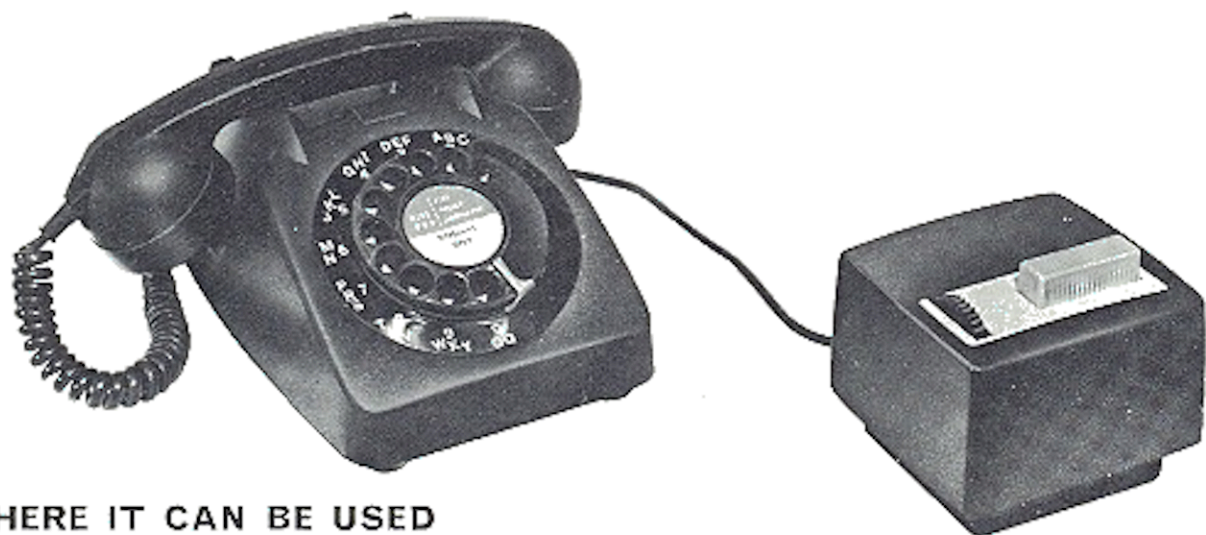

If you have to wait for a reply from a distant telephone (you can leave the Speakerset switched on and have both hands free until a reply is received).

If your shorthand typist has to listen to lengthy dictation over the telephone.

If a group of people in your office wish to listen together to an incoming call.

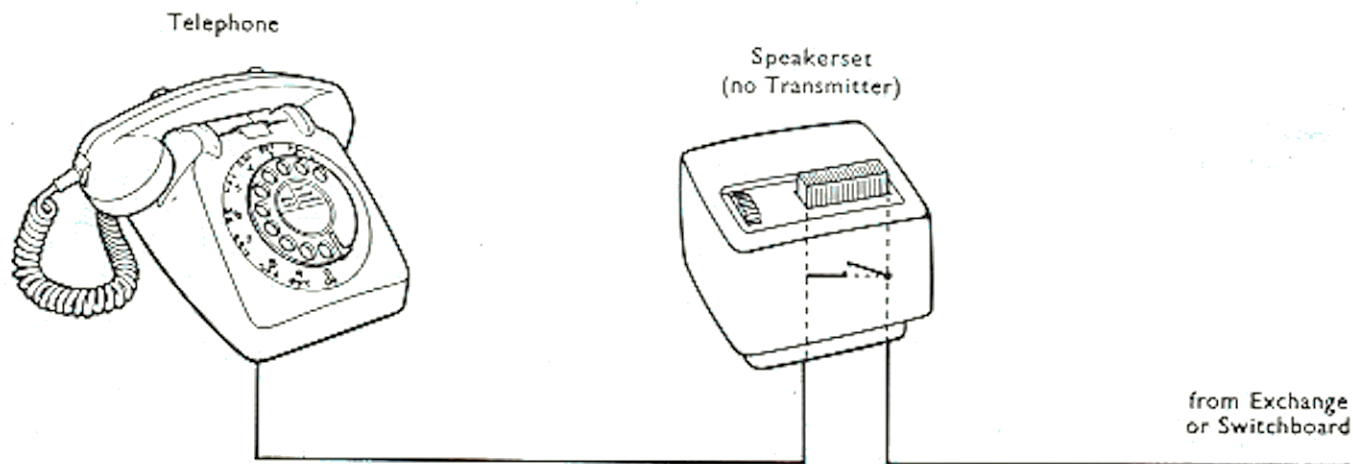

## IN THE HOME

It can be used by the family to listen together to a message from a relative or friend.

## WHERE IT CAN BE USED

It can be used on most types of exchange lines, exclusive or shared; on private branch exchange extensions, and on many plan installations.

## HOW TO USE THE SPEAKERSSET

You make or receive a call in the usual way, using the normal telephone. The switch on the Speakerset brings it into use; when it is switched on a light glows inside the switch and incoming speech is amplified. Volume can be controlled over a wide range by the knurled wheel. When the Speakerset is switched on the handset cannot be used and outgoing speech is not possible.

When the set is switched off, by depressing the switch again, the light goes out, the loudspeaker is disconnected, and the telephone can be used normally.

If the apparatus is inadvertently left switched on, the bell will not ring and your line will appear engaged to incoming calls, even though the handset has been replaced.

## WHAT IT COSTS

There is a connection charge of £1 and a quarterly rent of 15/-.

If you would like to know more about the Speakerset, or other loud-speaking telephones, please get in touch with your Telephone Manager's Office. They will gladly arrange a demonstration.
